

Aerospace Engineering (2016-2017 Catalog)

Astro Track (Space)

All courses listed on flow chart must be taken.

Please defer to catalog for official degree requirements.

* Please see Course Catalog for additional options. These options should be explored if:
 a) You have unsuccessfully explored co-op opportunities, or
 b) You prefer to pursue undergraduate research opportunities, or
 c) You wish to pursue depth in a particular technical area.

Please be aware that co-op opportunities should be explored as early as possible (i.e., anytime following the completion of your Freshman year) to provide yourself with the best possible chance to attain a co-op prior to the completion of your degree program curriculum. If the co-op course is taken during the semester indicated on the flowchart, graduation will be delayed while the student completes the remaining courses listed for this semester.
